

ARJUN KUMAR TRIPATHI

Varanasi, UP | Open to Relocation | Remote

Phone: [+91-6001644924](tel:+91-6001644924) | Email: arjuntripathi1724@gmail.com | [LinkedIn](#) | [GitHub](#)

Summary

Backend-focused Software Development Engineer with experience building scalable REST APIs, distributed systems, and containerized deployment pipelines using Node.js, TypeScript, Docker, and Redis. Seeking Backend / Full Stack / SDE-1 roles.

Education

Shaheed Bhagat Singh State University, Ferozepur

Sep 2022 – Jul 2026

B.Tech in Computer Science Engineering | **CGPA: 8.0**

Punjab, India

Experience

Daleyork

Jun 2026 – Present

Software Development Engineer Intern

Remote

- **Built and shipped an AI-powered travel itinerary platform** using Next.js, Node.js, Firebase, and AI APIs, enabling personalized itinerary generation, AI-powered image captioning, user authentication, trip planning, and booking workflows.
- **Developed Salty Pumpkin**, a full-stack e-commerce platform for kids' products with authentication, product catalog, shopping cart, inventory management, order lifecycle, admin dashboard, and secure Razorpay payment integration.
- Designed backend APIs, Firestore data models, authentication flows, reusable application modules, and responsive interfaces while collaborating in a fully remote, async-first engineering team using Git-based workflows.

Projects

ShipStack — Distributed Deployment Platform [[GitHub](#)] [[Demo](#)]

Mar 2026

Node.js, TypeScript, Docker, Redis, PostgreSQL, AWS S3, Cloudflare R2

- Designed and built a Vercel-inspired deployment platform capable of cloning Git repositories, executing isolated Docker builds, and serving deployment artifacts through unique subdomains.
- Designed a distributed multi-service architecture separating API, upload, build worker, and deployment services for independent scalability and fault isolation.
- Implemented asynchronous build orchestration using Redis queues (LPUSH/BRPOP) and dedicated worker services, enabling concurrent deployments without blocking API requests.
- Engineered secure Docker sandboxes with non-root execution, read-only filesystems, and CPU/memory isolation for safely executing untrusted repository builds.
- Implemented immutable artifact storage using AWS S3 and Cloudflare R2 for reliable deployment versioning and low-latency asset delivery.

Technical Skills

Languages: JavaScript, TypeScript

Backend: Node.js, Express.js, Hono.js, REST APIs, Authentication, JWT, WebSockets

Databases: PostgreSQL, MongoDB, Redis, Prisma

Cloud & DevOps: Docker, AWS (EC2, S3, IAM), Cloudflare R2, Cloudflare Workers, Linux, Git, GitHub Actions

Frontend: React.js, Next.js, Tailwind CSS

Architecture: Distributed Systems, Microservices, Worker Queues, Asynchronous Processing, System Design

Core CS: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Object-Oriented Programming

Achievements

Competitive Programming Head, GDSC (Oct 2024 – Apr 2025) — organized weekly DSA contests for 100+ students. | **Student Coordinator**, Placement Cell (Mar 2024 – Dec 2025). | Solved **300+ DSA problems** on LeetCode and Codeforces.
